#### What is Living Organ Donation?

*Unfortunately, there are currently not enough organs donated by deceased donors to meet all of the needs of patients awaiting an organ transplant. Therefore, over the last few years, transplant surgeons and other members of transplant teams throughout the country have developed new techniques and procedures to save more patients' lives through living donor transplants. It is now possible for a living person to donate a kidney, a portion or their liver, a portion of a lung and in some rare instances a portion of the pancreas.*
